

Summary

- **6.5 years** of experience as a **Java Developer** and **Full Stack Developer** in **banking**, **fintech**, and **eCommerce** applications.
- Proficient in developing **microservices architectures** using **APIGateway**, **Load Balancer**, **Fault Tolerance**, **Saga**, and **CQRS** patterns.
- Extensive experience with **RESTful** and **Kafka** communication for both synchronous and asynchronous operations.
- Skilled in creating **Search Engines**, **Recommendation Engines**, and **Notification Services** tailored to user needs.
- Expertise in **Authentication** and **Authorization** using **Spring security** and
- Strong background in **Distributed Systems**, including caching, logging, and transactions, applying **CAP theorem** principles.
- Proficient in **SQL** and **NoSQL** databases (MySQL, Oracle, MongoDB) for optimal data storage and retrieval, as well as unit and integration testing with **JUnit** frameworks.
- Well-versed in **CI/CD** practices, including **blue-green deployments**, and experienced in managing **migration projects** for smooth transitions.

Experience

Publicis Sapient, Bangalore — Senior Associate Engineer, Nov 2021 - Present

Lloyds Banking Group (Loans)

- Worked on a banking application for loan approvals, managing four microservices to streamline customer loan workflows.
- Java developer managing config properties, filters, and SQL scripts.
- Worked on modifying request and response filters, and updating properties for various environments.
- Written JUnit test cases for filter components to ensure robust functionality.
- Created mock APIs for sandbox deployment and tested multiple microservices.

Enrich Application:

- Backend developer managing 5 microservices including GraphQL and MongoDB integrations.
- Developed CRUD APIs, implemented Redis caching, and optimized database queries using MongoTemplate.
- Integrated production deployments and handled complex production bugs.
- Involved in day-to-day communication with DevOps teams to ensure smooth CI/CD pipeline operations.

H&M eCommerce Application:

- Developed microservices for RestAPIs, **CRUD operations**, **Search**, **Recommendation Engine**, and **Cron services**.
- Developed recommendation microservices to feed data to the Azure recommendation engine and integrated with its API to generate personalized recommendations.
- Built a search service with microservices using Azure Cognitive Search and data migration from Azure data lake to the search service.
- Implemented **circuit breakers** for handling internal microservices and developed a cron microservice for daily scheduled data migration.
- Handled unit tests using JUnit5, resolved sonar issues, and performed production deployment with bug fixing.

Onstak Technologies — Software Engineer, May 2021 - Oct 2021

NetAPP Client

- Developed and optimized REST APIs, handled JUnit testing, and enhanced email services for client-specific use cases.
- Assisted in creating client email adjustment services with full test coverage.
- Involved in resolving critical sonar issues, security vulnerabilities, and ensuring production deployments without downtimes.

1SilverBullet - Bangalore — Software Engineer, Nov 2020 - May 2021

- Worked on a **fintech application** involving authentication (JWT, OTP), third-party API integration, and SQL operations using Hibernate ORM.
- Integrated CKYC API with public-private key encryption for secure user verification.
- Implemented OTP-based user authentication flows (email, mobile), ensuring secure login experiences.
- Used Flyway for database migration management and performed caching with custom hashmap implementation for performance improvements.
- Deployment microservices in AWS EC2 instances, used AWS rds and s3 bucket storage

Capgemini, Bangalore — Senior Software Programmer, Sep 2018 - July 2020

MUFG client

- Worked on a **banking migration project** to update technology stack from JDK6 to JDK11, and migrated from legacy EJB services to Spring Framework.
- Led the migration of XML parsers from JDOM to JAXB, and handled complex security-related enhancements such as SQL injection protection.
- Written unit tests for EJB-based services using Arquillian to ensure code quality and coverage.
- Responsible for resolving critical Veracode and SonarQube issues for maintaining coding standards.

HereMaps, Mumbai — Intern, July 2017 - Dec 2017

- Contributed to the **street parking service**, and developed frontend and backend applications for cloud storage (AWS S3).
- Enhanced street parking service functionalities and developed new features as per client requirements.
- Built a data-mapping tool to upload customer data into cloud storage, optimizing file handling and cloud data synchronization.

Skills

- Languages:** Java (8, 11), SQL, JPQL, HQL
- Frameworks:** Spring, Spring Boot, Hibernate, JPA
- Tools:** Docker, Kubernetes, Redis, Kafka, Git, Jenkins
- Databases:** MySQL, Oracle, MongoDB
- Cloud:** AWS, Azure
- Testing:** JUnit5, JUnit4
- Frontend:** Angular8, JSP, HTML, CSS, JavaScript

Education

BITS Pilani, Hyderabad -2013-18

B.E. Electrical and Electronics Engineering
M.Sc. Chemistry
